THE BASICS: The Martingale Strategy

Basic strategy is easy. Double the bet when you lose so that your eventual win covers all bets made. Simple, logical and a bad run of luck can leave you homeless. Its a silly strategy for most markets (a stock price can stay high, too many blackjack losses, etc.) but its PERFECT for Forex because currency prices usually move up/down as a normal function of business. BUT... too many 'Double-Ups' can be dangerous to your account balance. The REAL example on the left shows 7 'Double-Ups' before cashout but actually only the 3 Blue Icons are actual 'Double-Ups', the Purple are GoldenGoose Protection Micro-Lot sales. The Account Risk was slashed 57%!!

Forex Investing can be **WILDLY** profitable yet also dangerously unpredictable. That's why Martingale is a smart strategy for pure technical trading. It works if the market goes up or down! If the market goes your way - cash in. if it goes against you simply double up until you eventually win. The weakness in Forex is that unexpected up/down price movement can drain your account because of the sudden need to execute multiple double ups. BUT what if you had a EA that could detect and ignore price spikes, know when the price is rising too fast and shift from double-up to safety mode, actually PANIC! after too many doubles and execute multiple strategies to profitably end the current trade then restart the profit chase? Well my friend the ForexGoldenGoose EA does all of this and 10X MORE! We'll explain everything in detail shortly but first...

THE BASICS: The Forex Currency Market & Metatrader (MT)

Forex Market Size: 3.21 Trillion Dollars Exchanged DAILY

Most Liquid Trading Market: Cash Out Instantly Anytime

Trading Hours: 24 Hours Day 5.5 Days per week

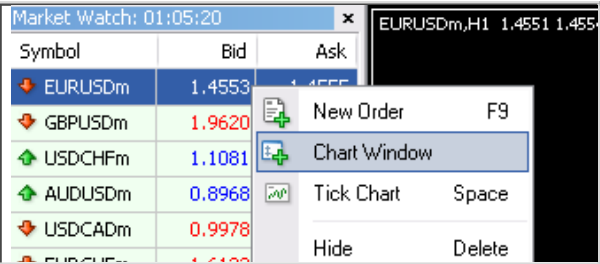

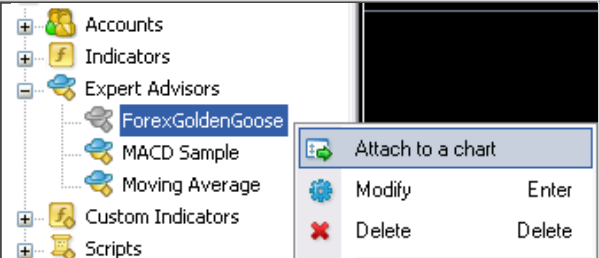

Great Margin: \$50 can trade \$10,000 (200:1)

Low Funding Startup: Most Brokers require \$250 or less!

Until recently the Forex Market was traded primarily by banks and investors with 100K accounts but Metatrader changed the rules and now even small investors can get in on the action. Metatrader created a simple Forex interface that has LIVE charting, extensive tools and most importantly AUTO-TRADING. Finally amateur traders have the same tools as the big boys. They don't manually trade. They let the robots do it. Smart Expert Advisors consistently outperform 95% of human traders. Now you can too, here's how:

In 3 Easy Steps You can be a Profitable Forex Trader

(Actually the robot does the trading but hey, it's your robot)

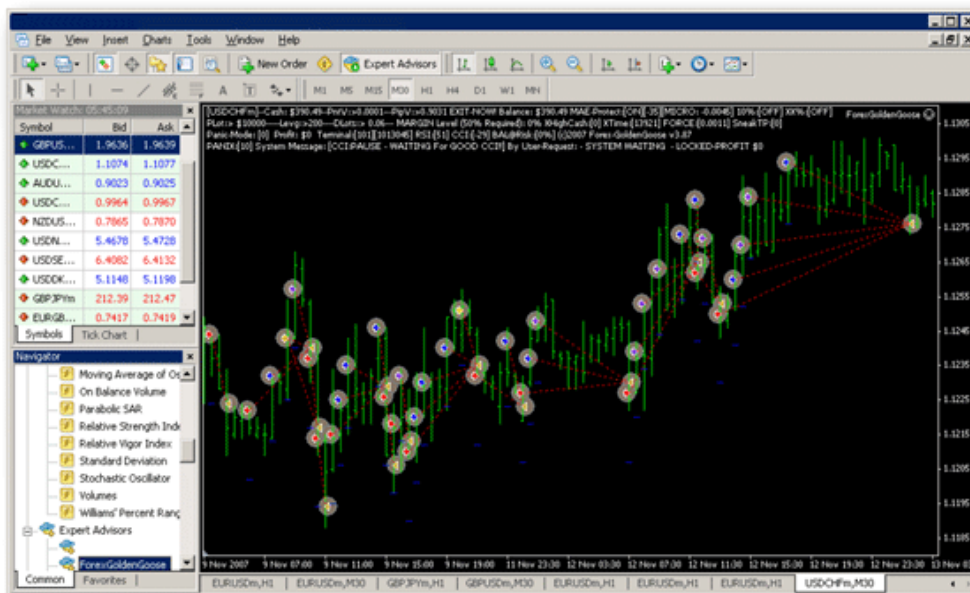

<p>Quick Forex - Step #1</p> <p>Open a chart of your desired currency pair (We tell you the best pairs)</p>	 <p>Market Watch: 01:05:20</p> <table border="1"> <thead> <tr> <th>Symbol</th> <th>Bid</th> <th>Ask</th> </tr> </thead> <tbody> <tr> <td>EURUSDm</td> <td>1.4553</td> <td>1.4555</td> </tr> <tr> <td>GBPUSDm</td> <td>1.9620</td> <td></td> </tr> <tr> <td>USDCHFm</td> <td>1.1081</td> <td></td> </tr> <tr> <td>AUDUSDm</td> <td>0.8968</td> <td></td> </tr> <tr> <td>USDCADm</td> <td>0.9978</td> <td></td> </tr> </tbody> </table> <p>EURUSDm,H1 1.4551 1.455</p> <ul style="list-style-type: none"> New Order F9 Chart Window Tick Chart Space Hide Delete 	Symbol	Bid	Ask	EURUSDm	1.4553	1.4555	GBPUSDm	1.9620		USDCHFm	1.1081		AUDUSDm	0.8968		USDCADm	0.9978	
Symbol	Bid	Ask																	
EURUSDm	1.4553	1.4555																	
GBPUSDm	1.9620																		
USDCHFm	1.1081																		
AUDUSDm	0.8968																		
USDCADm	0.9978																		
<p>Quick Forex - Step #2</p> <p>[Right-Click] while selecting the ForexGoldenGoose and select "Attach to a chart"</p>	 <ul style="list-style-type: none"> Accounts Indicators Expert Advisors <ul style="list-style-type: none"> ForexGoldenGoose MACD Sample Moving Average Custom Indicators Scripts <ul style="list-style-type: none"> Attach to a chart Modify Enter Delete Delete 																		

Quick Forex - Step #3

The EA will attach itself to the chart and begin trading according to easily modified user inputs

And until you tell it to stop trading the
ForexGoldenGoose will repeatedly Open, Close
and Profitably Manage Your Forex Trades - Automatically!

ForexGoldenGoose USDCHF Test

10/23/07 to 11/28/07 USDCHF

XCASH (Extra Cash) is an optional feature we've added to the GoldenGoose System. It can dramatically increase profits when used properly. It's a fully automatic feature that you simply have to turn 'ON'. These tests shows backtest results for FGG normal usage and the same period with XCASH turned 'ON'.

[FGG Test - XCASH \[OFF\]](#)

[FGG Test - XCASH \[ON\]](#)

2/28/08 from Shawn Ambrose - Sarasota, FL

Very nice results so far -- 31.99% ROI after just one day of demo testing with very little DD (if any). You listed 5 pairs on the website that you felt were appropriate for this EA, but I threw in a 6th pair (usdjpy) just so my screen would look good (he he) when I did a "vertical file" command. The usdjpy was actually the big winner (see attached statement). This is a great tool and you've done an exceptional job with this EA.

The ForexGoldenGoose Expert Advisor (EA) Multiple Layers of Protection Safeguard Your Investment

Anyone can create a winning Forex strategy. It's not difficult. A price can only move up or down so you have a 50% chance of being correct. So just like a lucky drunken gambler, anyone can have a run of good luck BUT in Forex you have an advantage over the gambler that loses on a coin flip or dice toss. In Forex you can stop the loss at anytime! A gambler that bets \$50 loses the entire \$50 if wrong but in Forex if you're wrong your loss starts at 1 cent and gets bigger. you can stop it at 1 cent, \$1, \$10 or \$100 its up to you. Robots that trade the market have similar advantages over manual human traders. Most EA's ignore these features and just trade the 'Make Money' part of the strategy leaving the EA helpless when the market changes direction. The GoldenGoose ALWAYS protects your precious nest egg.

NOTE: Some of the methods revealed below are being shown to the public for the first time. There will be a lot of 'Why didn't I think of that?' and they will be copied but these are only a few of the methods embedded in the 1,400+ lines of code that make up the ForexGoldenGoose EA, just remember - We did it first and we do it best! A look behind the curtain....

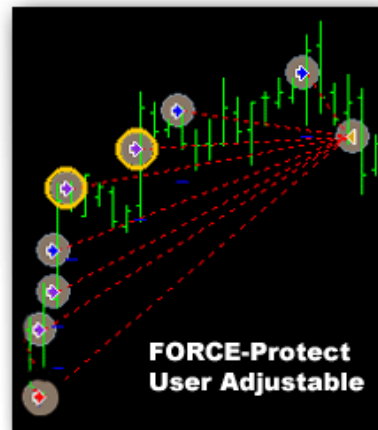

Time Protection: Auto-Protect from Fast Rising Markets

This is verrrry cool. It takes advantage of a unique strength of robot trading. You couldn't manually trade like this with ease but it's no problem for the robot. Here's the logic: If the price has risen more than (x) points within 30 minutes (changeable) *and stays higher* buy the smallest possible lotsize (.01 or .10) - GENIUS! This lets the Martingale take a low cost elevator ride and it prevents it from buying lots unless the market is relatively calm. This helps you follow

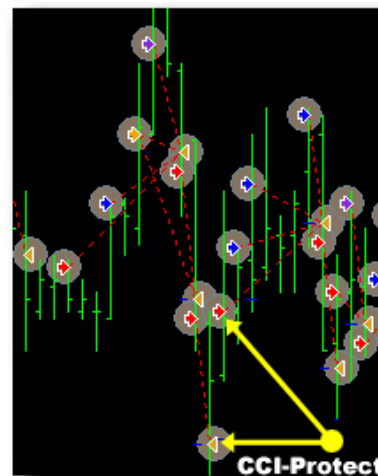

the flow of the market while avoiding random spikes caused by large bank buys or sells.

FORCE Protection: Auto-Protect from Sudden News Spikes

Technical trading can be dangerous because you're often in the market when major news events hit. Unless your EA has some protection from that situation you're always at the risk of running good until... The GoldenGoose uses the FORCE indicator to determine if the market has risen dramatically. In combination with the [true-indicator] Time Protection it's info we can use to add a second layer of protection. Once again the EA buys the smallest possible lotsize to protect your account.

CCI Protection: Avoid Dangerous Trading Entry Points

There are a few indicators that we like quite a bit and the Commodity Channel Index (CCI) is one of them. It reveals overbought or oversold markets. Trading using only the CCI can be tricky but for the GoldenGoose its a winner. In our example the trade gets cashed out (Gold) by a fast drop in the currency. If we opened another trade it would be in a bad spot (usually a new [red-open] follows a [gold-cashout]) and creates unnecessary 'Double-Ups'. The huge drop created a HUGE negative CCI value (-284). By opening orders only when the CCI is between -100 to +100 the EA will pause after closing the order and not resume until the market action has smoothed.

Indicators: A small word about the way we use them

In the CCI example you see that we use indicators but in an almost sideways manner. Some people would try to directly trade the highs and the lows of the indicator and they would get burned bad! Most people want indicators to relate directly to the highest or lowest price of a forex currency. **They Don't Work That Way!** The only true-indicator of price direction is **THE PRICE**. Can CCI give me a reliable gauge of market activity? Sure! When it's at zero I know the market is perfectly calm and that's all i need to know. Indicators are useful when you can extract the small nuggets of information they provide and use it to your advantage. They fail terribly when you ask too

much of them. We realize the limitations of indicators and only use them when they can truly enhance the strength of the Expert Advisors we create for ourselves and our customers. (we trade the exact same EA's that we sell to you. We put our money....)

More ways the ForexGoldenGoose Protects & Increases Your Profits...

More Account Protection Increases Your Profits

Bailout by Account % or Dollar Amount (Never Blowup Your Account!), PANICMode stops trading after profitably closing current orders, PANIXMode auto-reduces trade TakeProfits after too many doubles, TRADESave puts the EA into 'Accept Any Profitable Trade Now! Mode', STALLMode detects sideways/stalls and cashes out at the first opportunity then restarts the sequence. These GoldenGoose protection modes go far beyond the 'Make-Money' strategy to safeguard your account balance.

Incredible Power that's Easy to Use

Powerful yet easy to use. The majority of settings are simple 'on/off' switches for activating the protections. Usually you'll turn everything 'On' but we've left the choices up to you. The EA loads with default settings that will work for most currencies. Make any tweaks you choose. 'Attach to a chart' and sit back and watch the magic.

COMPARE THE NUMBERS

Your Bank (Best Case)	ForexGoldenGoose (Worst Case)
Pays You: 0.416% monthly equals 5% yearly	Pays You: 5% monthly equals 60% yearly!

An Incredible 1200% Difference

(and we would be ashamed if we only averaged a pitiful 5% a month. even in mild activity months we usually average 10-15%.

Ideal months 20 to 40% or more. That's why we Love The Forex!

Invest the way your Bank Invests Your Money!

All financial plans need a small 'go-for-it' strategy to back-up sound yet low-return investments. Some choose startup business', gambling, stocks, etc. to add the higher risk, higher profits portion to their portfolio. Now for the first time the Forex Currency Market offers the same combination of low-cost entry, controllable risk and high profit returns that's available to banking institutions worldwide to us, the average consumer. Take advantage. Good Luck, hope to see you on the inside.
