

## HEDGE EA v.4

Some notes regarding the parameters of this EA:

- **ExpertName:** The first part of the comment line of each trade
- **Magic :** The magic number that identifies each pair
- **Symbol1 :** The first symbol of the pair
- **Symbol1islong:** Set to true to put a buy order, false put a sell order.
- **Symbol2 :** The second symbol of the pair
- **Symbol2islong:** Set to true to put a buy order, false put a sell order.
- **Lots :** Symbol1 lot size if money management is disabled
- **Ratio :** lot size of symbol2 is equal to Lots x Ratio
- **StopManageAcc :** Set to true will close all orders with this Magic Number
- **UsePips :** If set to true it will use pips to calculate profit to be reached. Probably we will have to remove It because we use swap too to calculate profit.
- **ProfitTarget:** The profit you want to achieve in each cycle. The orders will remain open until this value is reached. Can be in USD or in Pips. Only use pips if you set UseSwap off.
- **Maxloss:** Global Stoploss value for all orders with this Magic number
- **UseCorrelation:** Set to true if you want to use correlation when entering new trades.
- **MinCorrelation:** Minimum correlation when entering new trades, if the UseCorrelation is set to true.
- **MaxCorrelation:** Maximum correlation when entering new trades, if the UseCorrelation is set to true.
- **UseSwap:** Set to true to use swap value on calculating profits. Remember to set Usepips false if you set this to true.
- **Accountismicro:** Set true if you are using a micro account.
- **MoneyManagement:** Set to true to turn on Money Management
- **Risk:** Risk assumed on each correlated pair, in percentage of equity.
